

Fully fired, non-wetting ceramic linings distributed exclusively by Allied.

Blasch CeraLoop™ forms are composed of dense, erosion resistant, non-wetting Blasch material making it ideal for non-ferrous alloys. The loops pre-fired technology provides consistency at start up and extends throughout the campaign. Customized forms are designed to fit your specific furnace needs. Installation is quick and simple.

CeraLoop™ is backed with Allied's DRI-VIBE® or castable refractory. These back up products will develop a quality hot face and can serve as a working lining.

Benefits:

- Consistent inductor start up and campaigns
- Tailored to specific application needs
- Faster heat up
- Pre-fired hot face reduces saturation during start up and sintering
- Start up furnace on any alloy

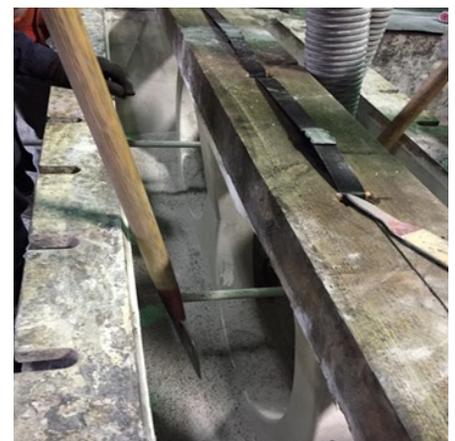

Product Line	Alloy	Material	Benefit
Procaster™	Copper	Ultra high alumina	Thermal shock resistance
Nitron™	Copper Aluminum/Zinc	Silicon Carbide	Improved non-wetting properties, better wear and higher heat transfer
Oxytron	Aluminum/Zinc	Silicon Carbide	Non-wetting
