

TEK-SIL

WORKING SMARTER, SAFER, & TOGETHER

TEK-SIL is a revolutionary product designed to assist foundries in complying with the new standards for respirable silica.

Allied developed TEK-SIL to significantly reduce the amount of respirable crystalline silica during installation.

This product is a high-purity, silica-based, dry vibratable refractory for lining coreless induction furnaces. It can be used for melting iron, copper and brass alloys, and some steel.
