

Allied has provided refractory solutions for over **60** years. We design products based on equipment, operating environment, fuel, and customer preferences and have experience in a wide range of applications. Allied Mineral Products Europe has an **All-In-One** refractory lining option, ideal for iron foundries, primary and secondary aluminum shops, aluminum foundries, non-ferrous foundries, and steel foundries. Allied can **transport the vessel, demolish the existing refractory lining, fully reline, completely dry out, and can transport the vessel back to the customer**—resulting in little downtime and a quick turnaround.

Benefits

- Quick turnaround time
- Controlled environment during installation
- Reliable and on-time schedule
- Heat-up can be complete on-site if requested

Applications

- Ladles | 10 T Al maximum capacity
- Pressure Pour Furnace | 10 T Fe maximum capacity
- Diecasting unit | 10 T Al maximum capacity
- Launders or launder segments | Up to the length of a normal sized truck

Note: Crane capacity 10 T
