

## DOUBLE CUPS

ICP ceramic double cups are an integral component in producing high-quality investment castings. Their dual-cup design helps minimize re-oxidation inclusions by allowing air to escape through the up sprue during casting, making them especially effective for non-ferrous applications. Manufactured from proprietary mullite or fused silica compositions, these cups are fully compatible with standard investment casting mold materials, ensuring reliable performance and material integrity.

**The ICP Advantage**

- Made in the USA
- ISO Certified
- Premium Materials
- Lighter Weight Technologies
- Custom Options
- Fast Delivery Times
- New Technologies

**Benefits of the products**

- Minimizes re-oxidation inclusions
- Allows air to escape through up sprue
- Compatible with most standard investment cast mold materials
- Custom designs to reduce turbulence/ prevent defects
- Thermal shock resistant materials for the reduction of mold cracking and inclusions

**Applications of the products**

- Robust mold attachment that provides enhanced pouring target to control the flow of molten metal into the mold.

Global **Refractory** Solutions
