

## SPECIALTY CERAMIC TUBES

### BENT, SEGMENTED, SQUASHED

ICP bent and segmented tubes are designed to facilitate complex gating of castings. Bent and segmented tubes eliminate the cutting and gridding of standard runner tubes into shorter lengths along alternative angles, then re-assembling to form a non-linear runner. ICP bent and segmented tubes can be made with male/female ends and are easily assembled to create countless non-standard geometries, such as 'S' curves.

Used as casting ingates, ICP squashed tubes provide a more economical solution for a smoother, more controlled metal flow into the mold and cleaner break at the ingate.

**The ICP Advantage**

- Made in the USA
- ISO Certified
- Premium Materials
- Lighter Weight Technologies
- Custom Options
- Fast Delivery Times
- New Technologies

**Benefits of the products**

- Facilitates complex gating
- Eliminates cutting and grinding of standard tubes
- Helps create countless non-linear, non-standard geometries, such as 'S' curves
- Minimizes turbulence
- Provides a cleaner break at the ingate

**Applications of the products**

- Economical and innovative gating components for the metal transfer process

Global **Refractory** Solutions
